**Unmatched Value**

**Most Extensive Product Offering**

**Exceptional Customer Service**

Dear Pool and Spa Industry Professional:

Thank you for considering Filbur Manufacturing for your pool and spa filtration needs. We are pleased to provide you with our catalog which showcases the range of filtration cartridges, grids and accessories available to you. As the leader in pool and spa replacement cartridges, we offer the most comprehensive line of filtration cartridges and grids. With over 600 different items to choose from, you are sure to find the right product for your application.

As a key provider of products to pool and spa OEM manufactures, our products are made to the highest standards and specifications demanded by the OEMs. With the strongest D.E grid on the market, cartridges built with reinforced center cores and end caps, and extruded PVC cores you are assured of products you can depend on. Extruded PVC cores have been time-tested and proven to be the strongest, most durable core for pool and spa filter cartridges—and, they are designed to allow free flow through the cartridge with minimal restriction or pressure drop.

Filbur Manufacturing is proud of its reputation for exceptional customer service, on-time shipping, and its unique ability to react quickly to customer requests. The new ownership and management team looks forward to working with all of its customers to continue the tradition of building good, long-lasting relationships. The last few years have been difficult for our industry but, thanks to our customers, Filbur Manufacturing continues to enjoy success. We stand ready to meet our customer needs as the industry recovers and well into the future.

Should you have any questions, or specific needs, please do not hesitate to call our customer service department toll free at 888-424-9185. We welcome the opportunity to assist you with all of your pool and spa filtration needs.

We thank you for your continue support of our products and wish you success in your business.

# The Complete Filter Cartridge BUYER'S GUIDE

Are all manufacturers really talking about the same cores?

DEMAND THE HIGHEST QUALITY FILTER... DEMAND FILBUR™

## CENTER CORES

SAME FLOW RATE and ENERGY DRAW  
(below)

**STRONGER**  
(EXTRUDED PVC)

**WEAKER**  
(less material in the core, corners prone to cracking)

### EXTRUDED PVC CENTER CORES

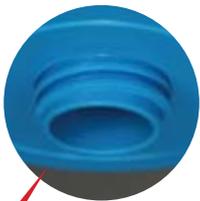

**Why do all other manufacturers except for one use extruded PVC center cores in their cartridges?** Because they are the strongest, hands down! Round holes provide for even distribution of stress whereas square holes create a build-up of stress at 90 degree angles resulting in cracking and eventual collapse of the center core and cartridge. Independent testing also confirms **there is no difference in flow rates or energy draw between the 2 types of center cores (left)**. As long as the total area of the holes in the center core are equal to or greater than the opening at the bottom of the end cap there will be no restriction in flow. ...that's basic hydraulics. (Some manufacturers should take note!)

### REINFORCED CENTER CORES

Filbur cores allow for increased debris loading and pressure differential while protecting the structural integrity of the cartridge.

## END CAPS

**MOLDED-IN-PLACE THREADS**  
(no flow reduction or adapter needed)

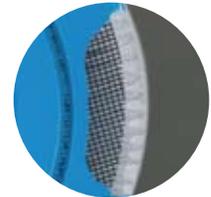

**PAD ADAPTER**  
(decreases flow rates and filtration)

### THREADS MOLDED DIRECTLY INTO THE END CAP

This makes for easy installation and removal and provides for a structurally sound cartridge. Independent testing confirmed that cartridges using PAD adapters actually decreased flow rates and filtration when compared to cartridges with molded-in-place threads. Adapters create unnecessary restrictions whereas our threaded cartridges allow for the unrestricted flow of water.

### \* REINFORCED ANTIMICROBIAL END CAPS

Screen mesh is inserted directly into the end cap which provides for added strength and integrity. Think about rebar in concrete, it's the same principal. Antimicrobial end caps repel odor causing bacteria and mold and are highly resistant to chemicals commonly found in pool and spa applications.

### EMBOSSED PART NUMBERS

This allows for easy identification and re-ordering. They should be clearly molded into the end cap.

## FILTER MEDIA

**4oz.**  
REEMAY®

FILBUR™

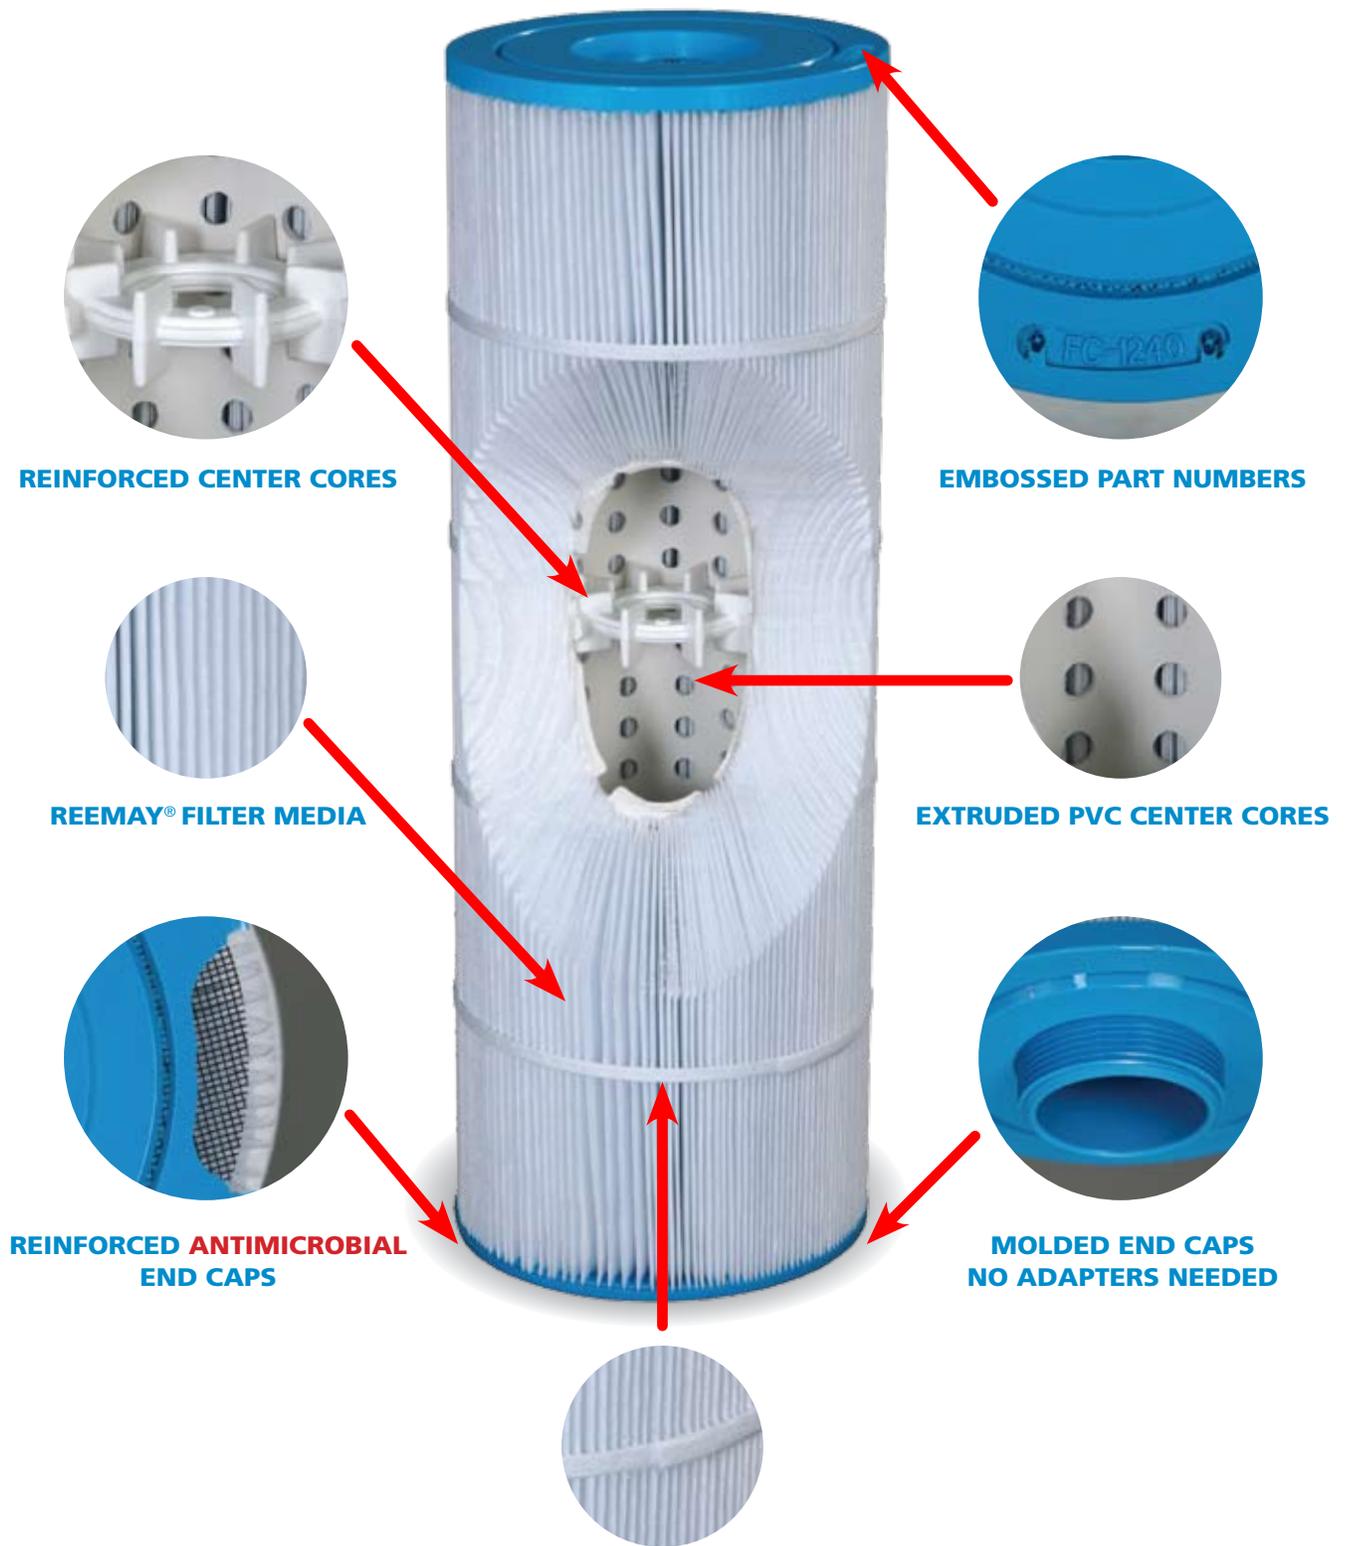

**3oz.**  
REEMAY®

OTHER

### REEMAY FILTER MEDIA (4oz. vs. 3oz.)

All Filbur pool cartridges use 4oz. weight Reemay media. This is the OEM spec and the NSF® requirement for turbidity reduction in pool applications. By substituting 4oz. media with 3oz. media you are allowing more debris to pass through the filter creating cloudy, less clear water. You also greatly shorten the cycle time between cleanings and the overall life of the filter by using 3oz. media in pool applications. Check the spec and demand the best for your customer! (While the 3oz. media is the standard for portable spa filters we do not recommend using this for pool filter applications.)

**REINFORCED CENTER CORES**

**EMBOSSSED PART NUMBERS**

**REEMAY® FILTER MEDIA**

**EXTRUDED PVC CENTER CORES**

**REINFORCED ANTIMICROBIAL END CAPS**

**MOLDED END CAPS NO ADAPTERS NEEDED**

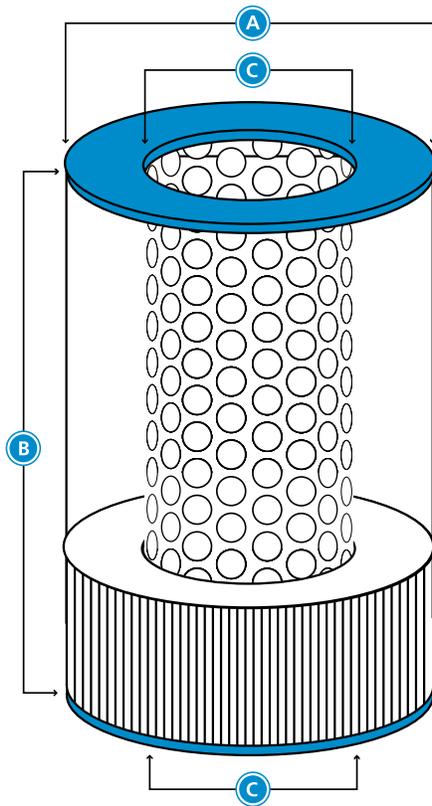

**BREAK-RESISTANT BANDS**

Bands keep pleats evenly spaced for optimum flow and filtration allowing water to pass through the pleats unrestricted thereby making use of all the surface area of the filter media.

## HOW TO FIND A REPLACEMENT CARTRIDGE FOR YOUR POOL OR SPA

- A. Measure the outside diameter of the cartridge in inches (+/- 1/16)
- B. Measure the overall length of the cartridge in inches (+/- 1/16), including the end caps. Do not include any handles, strings, etc. A more accurate measurement is made by measuring through the center of the cartridge when possible.
- C. If the top and/or bottom is open, measure the inside diameter of the opening (+/- 1/16 inch). Match the cartridge end cap configuration to either a corresponding one on the page or the complete end cap gallery (page #5).
- D. Make note of the manufacturer (OEM) and model number of the filter the replacement cartridge will be installed.
- E. Take note whether or not there is a center core (PVC pipe in center). Also count the number of pleats (+/- 2).

The Filbur Catalog for replacement cartridges is divided into two sections, Dimensional and Pool/Spa OEM. The cartridges are listed alphabetically by original manufacturer, and then each cartridge for that manufacturer is listed from the smallest O.D. (outside diameter) to the largest, then by overall length, top (measurement or handle, etc.), bottom diameter, and description (manufacturer).

## HOW TO COMPUTE THE SQUARE FOOTAGE OF A CARTRIDGE

1. Count the number of pleats and measure the pleat depth in inches.
2. Measure the length of the cartridge in inches excluding the end caps.
3. Multiply the number of pleats by 2 and multiply that number by the pleat depth. Multiply the total by the length of the cartridge (excluding the end caps) and divide that number by 144.

**# of Pleats X 2 X Pleat Depth X Pleat Length** ÷ 144 = cartridge square footage

**Example:**

# of Pleats 100	x 2 x	Pleat Depth .750	x	Length 12.25	÷ 144 =	12.76
--------------------	-------	---------------------	---	-----------------	---------	-------

# CARTRIDGE CARE AND CLEANING ACCESSORIES

## PURE 'N CLEAN™ THE ULTIMATE CARTRIDGE & D.E. FILTER CLEANER

It melts away calcium, minerals, dirt and oils.

Our fast action multipurpose cleaner removes dirt, oils and scale. Deep penetrating action renews cartridge and D.E. filter efficiency and flow rate.

### PROFESSIONAL GRADE

*Sold in case quantity only.*

## MICRO-KLEAN™ FILL FILTERS

Purify your water before you fill your pool or spa with the new Micro-Klean fill cartridges. Available in both a pleated and disposable version these filters reduce total dissolved solids (TDS) from your water and increase the quality of your pool or spa water. Our pre-filter is 90% efficient and removes the following contaminants; dirt, sediment, rust, calcium, iron and copper. Attach the Micro-Klean filter to the end of any garden hose and begin the fill ...it's that simple!

- Attaches to the end of any garden hose.
- Extends filter life.
- Removes solids from water.
- Reduces hard mineral deposits.
- Easier to balance chemicals from the start.
- Great for plaster crews!

## WHEN AND HOW TO CLEAN YOUR FILTER CARTRIDGE

**WHEN:** When the pressure gauge on your filter tank reaches 8 p.s.i. above the pressure recorded when a new cartridge is installed, or when there is a noticeable decrease in the pressure coming from your return jets, it is time to clean your cartridge.

1. Turn the power off to your pump and bleed the excess air pressure of the system using the air valve on the filter. Remove any band clamps and/or lids to your filter. Remove the cartridge from the filter canister and dislodge any loose debris by directing a stream of water from a garden hose between each pleat. Do not use a high pressure car wash wand or a stiff brush to clean your cartridge. These abrasive methods may damage the filter media and snap the bands.
2. Spray Pure 'n Clean™ filter cleaner on the cartridge or grid to remove any oils or other organics. If stubborn stains persist, soak the cartridge overnight in a solution of TSP.
3. Rinse the cartridge thoroughly with clean fresh water and return it to the filter tank. Secure the tank lid and any band clamps completely and restart your filtration system per manufacturers instructions.

!

### CAUTION

- Follow your filter equipment manufacturer's instructions when removing or re-installing your filter cartridge.
- Always shut down your system before working on your cartridges.
- We recommend against acid washing filter or using a pressure washer to clean the media.

An **aquadic** way to save time and money.

# FILBUR<sup>TM</sup> FREEDOM<sup>TM</sup>

PREMIUM ANTIMICROBIAL CARTRIDGES

CLEANER, CLEARER, PROTECTED.

WIN THE  
BATTLE  
AGAINST  
BACTERIA,  
MOLD AND  
MILDEW.

- **PREVENTS HARMFUL BACTERIA FROM GROWING ON THE CARTRIDGE.**

Less bacteria results in a reduction of foul odors, algae, black mold and other harmful contaminants which foul a cartridge.

- **KEEPS PROTECTING.**

Antimicrobial Protection lasts as long as the cartridge itself.

- **INCREASE MARGINS / PROFITS** by selling Reemay<sup>®</sup> with Microban<sup>®</sup> technology.

- **UNIQUE BLUE COLORED MEDIA** differentiates itself from others filters in the marketplace calling to attention the antimicrobial protection in the cartridge.

- **EASIER TO CLEAN** than any other filter in the marketplace.

#### MEDIA CROSS-SECTION

1. 100% Polyester core for strength and durability
2. Polyester Microban<sup>®</sup> sheath for ease of maintenance

## FREQUENTLY ASKED QUESTIONS

**1. What is Microban® antimicrobial product protection?**

Microban® technology is built-in antimicrobial protection for solid products, coatings and fibers. Microban® antimicrobial protection gives products an added level of protection against damaging microbes such as, bacteria, mold and mildew that can cause stains, odors and product deterioration.

**2. How do products with Microban® antimicrobial protection work?**

Microban® protection is built-in to the product during the manufacturing process. When microbes come in contact with the product surface, Microban protection penetrates the cell wall of the microorganism and disrupts cell functions making the microorganism unable to function, grow and reproduce.

**3. What benefit do I get from products with Microban® antimicrobial protection?**

Microban® protection continuously fights the growth of microbes that can cause stains, odors and product degradation. Microban® protection makes the products in your home easier to clean and keeps them cleaner and fresher between cleanings.

**4. What types of microorganisms does Microban® protection work against?**

Microban® antimicrobial protection is effective against most common bacteria, yeasts, molds and fungi that cause stains, odors and product degradation. Microban technology is not designed to protect users from disease causing microorganisms.

**5. How do I know that Microban® antimicrobial product protection is safe?**

Microban® technology has undergone extensive independent laboratory testing and has a long history of safe use. It is registered with the EPA for all applications in which it is used. Microban® additives can be found in the products of leading consumer, industrial and medical products manufacturers around the world.

**6. Does this mean I don't have to clean my products as much or as carefully?**

No. Microban® protection provides continuous antimicrobial protection that protects the products in your home, helping to make them easier to clean and keeping them cleaner between cleanings. However, normal cleaning practices recommended by the product manufacturer should be maintained.

**7. Does Microban® protection begin working immediately?**

Microban® protection begins to work as soon as the microorganism comes into contact with the product surface. It then works continuously to maintain a consistently lower bio-burden than would be expected on a product without Microban® antimicrobial protection. Under the right conditions, microbes on an untreated surface can double every 20 minutes! Microban technology is not a disinfectant and is not a substitute for normal cleaning practices.

**8. How long does Microban® antimicrobial protection work?**

Microban® protection is built-in during the manufacturing process and will not wash off or wear away. Microban® protection is engineered to provide continuous antimicrobial product protection for the useful lifetime of the product, keeping the products in your home cleaner and fresher for longer than ever before.

**9. Has anyone ever gotten sick from using products with Microban® antimicrobial protection?**

Extensive testing and a long use history have shown Microban® product protection to be safe. While it is impossible to say that no one will ever experience an allergic reaction to anything, it is highly unlikely a negative experience would be observed. Microban® additives are used in very low levels measured in parts per million.

**10. Does the use of antimicrobials cause resistant strains of microorganisms?**

No. After more than 30 years of use in numerous consumer, industrial and medical applications around the world, there has been no evidence of resistant strain development.

## CARTRIDGE FILTER OEM SECTION POOL & SPA

This section details the cartridges available by Original Equipment Manufacturer (OEM). You will find in alphabetical order the listing of both pool and spa manufacturers. We have combined both pool and spa sections into one quick and easy cross reference. All Filbur cartridges include the features listed below.

- Reemay® polyester media with no bonding agents to restrict filtration efficiency.
- Straight, sharp and evenly spaced pleats for maximum filtration efficiency.
- Durable polyurethane end caps which provide strength and assure proper sealing in filter tank.
- Reinforced center cores on all pool cartridges which use a PVC center core for support.
- Evenly spaced holes in center core for maximum distribution of flow through the cartridge.

## D.E. FILTER GRIDS DIATOMACEOUS EARTH

Filbur genuine replacement grids are designed for Diatomaceous Earth filter applications. All grids are constructed with a special reinforced center core for added durability. Seams are stitched with heavy duty, chemical resistant string and are sonic welded to prevent fraying. Our custom designed grid cloth will handle more backwashing than the competition.

- Superior strength and quality.
- Packaged for distribution.
- Proprietary grid cloth outlasts the competition.
- Sold in case quantities only.

# ENGINEERING DATA AND MEASUREMENTS

## UNDERSTANDING MICRON RATINGS FOR FLUID FILTERS

A micron rating for a fluid filter is a generalized way of indicating the ability of the filter to remove contaminants by the size of the particles. *AIR FILTERS ARE NOT RATED BY MICRON SIZE.*

The micron rating does not properly and fully describe either the efficiency or the contaminant-holding capacity of the filter.

**What does the word micron mean?**

It is a unit of linear measure in the metric system used to measure distance from one point to another. It is used like the inch, foot, centimeter and millimeter to measure the length, width, or diameter of objects.

A filter that is marked "10 microns" has some capability in capturing particles as small as 10 microns. However, there is no one accepted method to measure and describe the size of particles that a filter can capture or the total amount of particles that the filter can hold.

When you see the filter marked "10 microns," you will not know exactly what this means unless you also have a description of the test and standards used to determine the filter rating.

Filter micron ratings are often based on one of these methods, but with possible variations:

- A. Nominal Micron Ratings
- B. Absolute Micron Ratings
- C. Multi-Pass Beta Ratings
  - A) **Nominal Micron Rating** usually means the filter can capture a given percentage of particles of the stated size. For example, a filter might be said to have a nominal rating of 90%, 10 micron size.
  - B) **Absolute Micron Rating** is a single pass test and is usually obtained by passing fluid containing glass beads through a flat sheet of the filter material. Any beads that pass through are captured and measured.
  - C) **Multi-Pass Beta Rating** has been accepted by many machinery manufacturers, as well as filter manufacturers, especially for filters used in fluid power applications; hydraulics, controls, transmissions, power steering and so forth.

The test uses contaminant specially graded by particle sizes added regularly in measured quantities to the fluid which is pumped continuously through the filter.

Measured samples of fluid are taken at timed intervals upstream and downstream of the filter. The contaminant in these samples is measured for particle sizes and the quantity of each size or ranges of sizes.

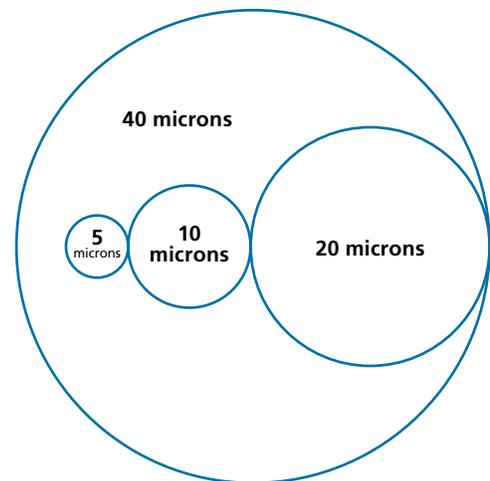

A ratio is then made for the intended micron rating:  
 An example: Particles upstream 10 microns and larger  
 Particles downstream 10 microns and larger  
 The Beta ratio would then be stated as Beta = 20

The multi-pass Beta ratio is accepted by many machinery manufacturers but not used in a public way by most of them to identify or specify their filters.

**Some suggestions:**

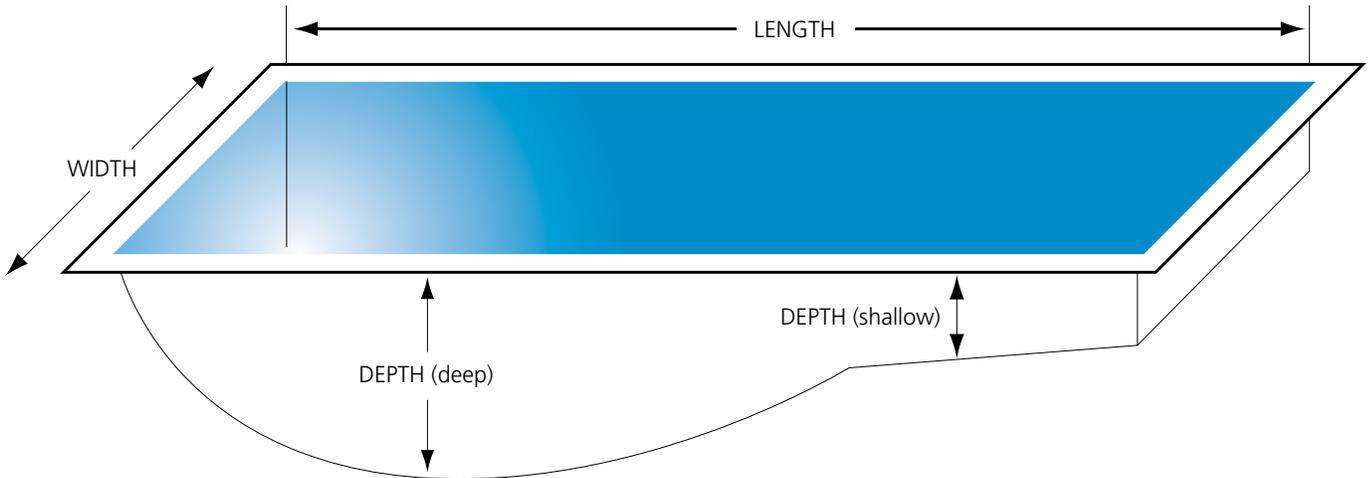

1. Use filters of high quality
2. Obtain filters by catalog listing, not just by "micro rating". Other important qualities should also be considered.
3. Pay close attention to service intervals and good service practices for the greatest economy of operation.

**RELATIONSHIP TO PARTICLE SIZE BY DIAMETER**

- 1 micron = 1 millionth of a meter
- 1 micron = 1 thousandth of a millimeter
- 1 micron = 39 millionth of an inch (.000039)
- 25.4 microns = 1 thousandth of an inch (.001)
- 40 microns = visible without magnification
- 40 to 90 microns = diameter of a human hair

**ESTIMATING TOTAL GALLONS IN A POOL OR SPA**

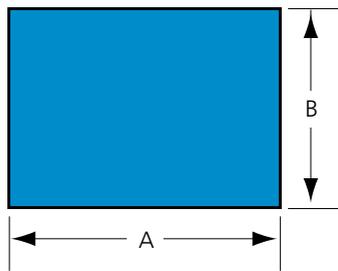

**Formula A:** Length X Width X Average Depth X 7.5

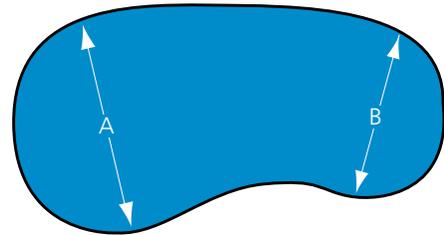

Example: Pool Length = 40 ft.  
 Pool Width = 20 ft.  
 Shallow Depth = 3 ft.  
 Deep Depth = 8 ft.  
 Total Depth = 11 ft.  
 Average Depth = 5.5 ft.

**Using formula A:**

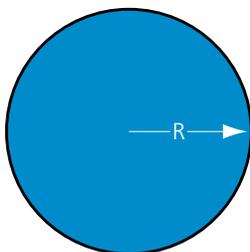

(step 1) 40 X 20 = 800 sq. ft.  
 (step 2) 800 X 5.5 = 4400 cubic ft.  
 (step 3) 4400 X 7.5 = 33000 gallons

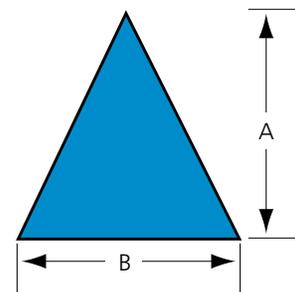

AREA = A X B

AREA = .45 X (A + B) C

AREA = 3.14 X R X R

AREA = A X B ÷ 2

The area in square feet for pools and spas can be determined by using one or more of the above formulas.
